

Second Mind *by Cognisyn*

Context before composition. Think clearly. Stay yours.

Second Mind turns naturally shared conversation screenshots into an evidence-linked, revisable relationship record. It separates observation from interpretation, exposes uncertainty, compares an isolated reply with a context-grounded one, and always returns the judgment to the human.

VERIFY IN 60 SECONDS

Demo video (2:28): youtu.be/n53Rs-6uDO4

One-click app: codespaces.new/AbbyFitz2-droid/second-mind?quickstart=1 (then: npm start)

Repository: github.com/AbbyFitz2-droid/second-mind (public, MIT)

Local run: npm install · cp .env.example .env · npm start — no API key needed

In the app: "Capture a screenshot" → "Try a fictional screenshot", then Situation → People → Interpretation → Action.

BUILT WITH CODEX + GPT-5.6 · PROOF OF PROCESS

Codex /feedback session: 019f5bd7-32bc-77f0-8836-651fd258b040 — one continuous build thread: 240 applied code patches across the server, context engine, reasoning engine, and UI.

Human decisions on record: the zero-cost architecture ("make it so it does not cost me" → the server-side PAID_API_ENABLED gate), the relationship graph, and Perspective Simulation all originate from the entrant's prompts in that session. Dated commit history corroborates.

INDEPENDENTLY RE-VERIFIED FROM A CLEAN CLONE

54 / 54 automated tests pass (npm test)

28 / 28 full-pipeline evaluations pass, 100% intent · schema · isolation (npm run eval)

4,188 ConvoKit conversations in the held-out research baseline — zero paid API calls

0 cloud databases; OCR and records stay in the judge's own browser

SEE LIVE GPT-5.6 REASONING IN THE PRODUCT

Open the Live Reasoning panel on the home screen: five lenses, one structured schema. Zero-cost deterministic engine by default; set PAID_API_ENABLED=true with an OpenAI key and the identical request routes to GPT-5.6 via the Responses API — the badge flips to "Live · gpt-5.6-terra".

Entrant: Abby Fitzgerald (solo) · Ireland. Core build: Codex with GPT-5.6 (session above).

Post-submission bug fixes and polish assisted by Claude Code within the Submission Period — every change verified against the same test suite, candidly recorded in the dated commit history. Evidence first, in the product and the process.
